### **Care Converge Offers Integrated Platform for Healthcare Organizations to Attract New Patients While Saving Time and Money**

NEW YORK—Healthcare is a competitive environment. Hospitals, medical centers and physician practices must develop great communication with patients and implement well-rounded, integrated solutions that improve patient care.

Care Converge is a premier integrated health portal that allows medical centers, hospitals and physician practices of any size save time and money while increasing patient satisfaction. The portal also helps the healthcare industry move another step closer to becoming completely paperless. The turn-key solution can be implemented quickly and efficiently.

Care Converge ([www.careconverge.com](http://www.careconverge.com)) is web-enabled, secure, streamlined and easy to use. It allows medical centers, hospitals, public health agencies and physician practices to interact with patients, employees and physicians efficiently and effectively with real-time interaction and connectivity. The HIPAA-compliant portal offers pre-registration, electronic bill payment and medical refills.

It can be created to mesh seamlessly with the organization's existing website, making it completely transparent to patients. Care Converge software manages multiple locations inherently, a feature that most portals do not offer.

Current customers report that the system saves money by allowing them to reduce staffing and paperwork, while increasing patient satisfaction due to the portal's interactivity, secure 24/7 availability-on-demand and ease of use.

The product suite offers modular portal tools that allow healthcare organizations to communicate with patients, consumers, physicians and employees. It includes:

- **A consumer portal** with an innovative, proprietary website content management system and tools that easily manages information for visitors and patients.
- **A patient portal** that encompasses patient registration, appointment scheduling, electronic bill payment, lab results and much more.
- **An employee portal** that includes employee self-service, events and classes calendar, job boards, patient requests and more.
- **A physician portal** that allows physicians to securely communicate with patients.
- **An extranet** is a secure way to connect and share information with other audiences such as board members.
- **An online referral portal** that streamlines the patient referral process.
